Project Title: Sewer Manhole Rehabilitation

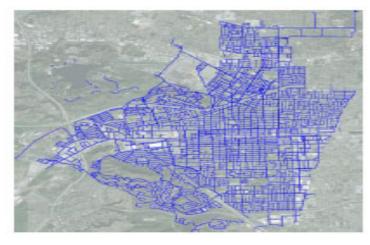

Project Description: Staff has identified multiple manhole structures within the city's 314 mile Wastewater Collection System, and over 6,000 manholes that will require rehabilitation. These efforts will reduce inflow/infiltration and help restore manhole structures that have structural deficiencies. Rehabilitation methods can include chemical grout, mortar, polymer, epoxy, polyurethane, cured-in-place (CIPP) applications, and/or removal and replacement of the manhole structure and associated appurtenances. This effort will help protect the city's aging sewer infrastructure against hydrogen sulfide corrosion, sewage, and other chemicals that could affect concrete or brick structures.

Capital Improvement Program Project Details

Project Title: Sewer Pipeline Condition Assessment

_ - 1

Council District:

_ - 2

Project Description: This project provides evidence for the criteria to remove, replace, reconstruct, and repair sewer main citywide. Sewer main will be identified for replacement and/or rehabilitation based upon age, condition, pipe material, and hydraulic constraints. The pipeline condition will be determined through use of closed-circuit television (CCTV) inspections, National Association of Sewer Service Companies (NASSCO) condition criteria codes, and existing field conditions. These identified locations for repair, replacement, reconstruction, and repair shall be coordinated with the City's Public Works and Water Resources pavement replacement projects.

Project Title: Sewer Force Mains - Pumping Plants 1, 2 and 3 Design

(Description changed FY 23-24)

Project Description: This project provides for the design of redundant force mains for Pumping Plants 1, 2 and 3 to make the force mains eligible for transfer to the Los Angeles County Sanitation Districts (LACSD). Ownership of the City's four sewer Pumping Plants and the force mains associated with Pumping Plant No. 4 was transferred to the LACSD in April 2013. The force mains for Pumping Plants 1, 2 and 3 were constructed in 1967, 1995, and 2002, respectively. Transferring these facilities will eliminate the City's future maintenance and capital costs for operation. This project includes all work, plans, specifications, cost estimates, associated easements, and materials in support of this project.
